

Krishna Chaudhary

krishanchauhdary2007gt@gmail.com | +91 8077169879 | Delhi, India | github.com/sudoKrishna

TECHNICAL SKILLS

AI: Agentic AI, AI Coding Agents, LLM Tool-Use / Function Calling, OpenAI-Compatible API Integration, Prompt Engineering, Context Management, Conversation Memory, Agent Evaluation (Evals), SWE-bench

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS

Backend: Node.js, Express, Prisma ORM, REST APIs, WebSocket (ws)

Databases: PostgreSQL, MongoDB, Redis

DevOps & Tools: Docker, Vercel, Turborepo, Git, GitHub, CI/CD, Automated Testing, Bun

FEATURED PROJECTS

shy — AI Coding Agent Harness

TypeScript, Bun, Next.js, OpenAI-Compatible API (DeepSeek)

<https://github.com/sudoKrishna/shy>

- Built a from-scratch autonomous coding agent loop in TypeScript with tool-use (bash, read, write, edit, grep, glob, web_fetch), parallel tool execution, and token-aware context compaction.
- Improved SWE-bench Lite resolution from an 8/18 (44%) baseline to 12/18 (67%) on 18 real GitHub issues, verified with the official Docker-based SWE-bench evaluation harness, by iteratively adding context compaction, glob/web_fetch tools, and a verify-before-done rule.
- Built an eval-driven development suite (11/11 private tasks passing) that caught 4 real production bugs, including a process-timeout bug and a working-directory logging bug.
- Added security guardrails: destructive-command blocking in the bash tool and an SSRF guard on the web_fetch tool.
- Shipped a live Next.js demo UI that streams agent reasoning and tool calls in real time over server-sent events, with per-user API keys.

Golt — AI-Powered App Builder

Next.js, TypeScript, Prisma, PostgreSQL, E2B, Turborepo

<https://github.com/sudoKrishna/golt>

- Building a Bolt-style AI app builder that turns natural-language prompts into working, deployable web apps using an LLM-driven code-generation pipeline with structured prompting.
- Running generated code in isolated E2B sandboxes, with a Prisma + PostgreSQL data layer for project, version, and deployment state.
- Built an in-browser live preview and edit loop so users can iterate on prompts and immediately see the LLM's generated changes reflected in a running app.

OPEN SOURCE & EDUCATION

Cal.com Contributor

Actively contributing to the world's leading open-source calendar and scheduling infrastructure platform.

Rocket.Chat Contributor

Contributing to Rocket.Chat, a widely used open-source team communication and collaboration platform, working directly in its large-scale TypeScript codebase.

Self-Taught Engineer

10,000+ hours of hands-on experience building and deploying complex distributed systems and blockchain applications.
